# Histology: An Identification Manual: With Student Consult Online Access, 1e

## Synopsis

This brand-new, user-friendly text takes you effortlessly through the step-by-step process you need to accurately distinguish the various components of each and every tissue, organ, and system under consideration. Each chapter contains a "commonly misdiagnosed" section to help you avoid the usual pitfalls in identification and a logic tree maps out the questions you should be asking yourself as you go through the identification process. A clear page design, concise text, and practical binding make this resource an indispensable friend in the lab. It's almost like having your own personal histology instructor at your side. Step-by-step guidance instructs you on when to use a low magnification or high magnification objective to accurately identify a structure. Large format micrographs accompanied by pen and ink drawings help you focus on the parts of the micrograph you should be assessing. A "commonly misdiagnosed" section at the end of each chapter helps you avoid common pitfalls. An appendix on techniques and stain procedures offers guidance on practical matters in the lab. Logic trees at the end of every chapter walk you through the steps of identification and promote logical thinking. This book comes with STUDENT CONSULT at no extra charge! ## Customer Reviews

I had Bob for undergraduate histology in which we used this book. I am now a first year medical student and have found this book to be absolutely fantastic. The book emphasizes how to understand what you are looking at under the microscope and teaches you how to rapidly orient yourself based on defining histological characteristics. One feature I found very helpful in preparing for lab practicals is the commonly missidentified tissues sections found throughout the book. These sections, combined with several decision trees, helped me develop the thought process I use whenever I look at a slide. I would recommend this book for any medical student, especially when preparing for practicals or boards.

So, I had Bob Tallitsch as a professor in college and we used the "copy/working version" of this text in our histology class. I loved the book so much with all of it's hints on "how" to identify things, instead of just looking at things and trying to recognize them like recognizing a person from a line up, that I bought it use in medical school the day it came out! I highly recommend this book for any that would like to learn histology the "right way" and be leaps and bounds ahead of your classmates in this area!

I was required to get this book and it was beyond boring and gave to much information not needed to get through Tissue ID.
